Professional Summary

Senior Product Engineer & Interaction Architect | Google Alum (Exceeds Rating)

Senior Engineer with 10+ years of experience architecting human-centered systems. Expert in **Human-Computer Interaction (HCI)** and building high-fidelity, accessible interfaces for complex data ecosystems. I leverage a **Bachelor of Fine Arts** background to treat software as a performance—focusing on narrative flow, audience (user) psychology, and seamless state management in non-deterministic environments. Skilled in **event-driven architecture**, enterprise-level integration patterns, and full-stack performance optimization. Specialized in bridging the gap between complex backend logic and user-centric frontend performance.

Professional Experience

Salesforce | Senior Member of Technical Staff (SMTS) *June 2022 – Present*

- **Technical Design Leadership:** Authored and iterated comprehensive Technical Design Documents for **Learning Program Plans, Attendance, Course Search**. Architected hierarchical requirement models and a **Connect API strategy** that balanced backward compatibility with high-performance, governor-aware loading and cross-team design parity and a responsive front end.
- **End-to-End Product Execution:** Repeatedly ship high-impact learner-facing features for **Education Cloud**, including advanced course search (GraphQL-backed, API supported), cart systems, and recurrence-aware registration logic. Improved system correctness for complex scheduling conflicts and linked-course enrollment edge cases.
- **Frontend Innovation and Accessibility (WCAG) Engineering Leader:** Lead recurring accessibility initiatives across high-traffic enrollment flows. Implemented focus management, ARIA live regions, and semantic structures to ensure seamless navigation for screen readers and small-viewport reflow, setting the standard for inclusive design in Education Cloud.
- **Full-Stack & Monorepo Systems Optimization:** Architect Java services, DAO layers, and **OpenAPI-style surfaces** within a large-scale **Bazel monorepo**. Stabilized integration and unit testing (Jest/Invocables) and managed complex dependency changes for attendance and enrollment APIs. Refined hierarchical completion semantics (AND/OR logic) and data mapping strategies to resolve ambiguous user requirements, streamlining the "Search → Cart → Registration" pathway for 100k+ users.
- **Rapid AI Prototyping:** Utilized AI-assisted development cycles to reduce design-to-production latency for complex student-facing applications.

Google | Salesforce Application Engineer *June 2020 – August 2021*

- **Engineered the Cloud Partner Lead Management System:** Built the foundational lead rules engine and sophisticated Lightning Web Components for Google Cloud Marketing.
- **Exceeds Expectations Performance:** Consistently delivered high-velocity, scalable solutions through close collaboration with cross-functional stakeholders and global dev teams.

Western Governors University | Salesforce Architect - Senior Engineer *May 2017-June 2020*

- **Enterprise-Level Design:** Defined organization-wide integration patterns using Salesforce DX Unlocked Packages.
- **Event-Driven Architecture:** Led technical teams in developing an event-driven change management system for student enrollment

TAB Bank | Salesforce Administrator & Developer / Business Analyst | *August 2013 – May 2017*

Technical & Leadership

- **Technical Stack:** JavaScript (LWC/ES6+), TypeScript, React, Java (Spring/Apex), GraphQL, OpenAPI, Bazel, Python, Jest, SLDS.
- **Leadership:** Mentor, RAD Women Code Coach (Since 2016); 4X Trailhead Ranger; Dreamforce & Snowforce Speaker.
- **Specializations:** Technical Design Documents (TDD), Human-Computer Interaction (HCI), WCAG 2.1 Compliance, Event-Driven Architecture.
- **Education:** Bachelor of Fine Arts, University of Utah.
